COURSE INTRODUCTION

The Course is designed for the students to pursue graduation and post-graduation with Economics in regular mode in semester system. The programme aims to inculcate economic thinking in students and help them in economic decision making. It aims to develop analytical view point in the students about the economic behavior of the people. The objective is to nurture the students as socially responsible and ethically aware citizens.

Programme Outcomes (Pos):	
PO 1	Economics subject enables the learners to build up a professional career as economists, financial advisors, economic planners and policy makers. It prepares them to cope up with the stress and strain involved in the process of economic development.

Programme Specific Outcomes (PSOs): UG I Year Undergraduate Certificate in Economics	
PSO1	To understand the basic concepts of Microeconomics and its applications.
PSO2	To understand the basic concepts of Economics.
PSO3	To understand the basic concepts of Macroeconomics and its applications.
PSO4	To understand the basic concepts of Indian Economy.

Programme Specific Outcomes (PSOs): UG II Year Undergraduate Diploma in Economics	
PSO1	To understand the basic concepts of Public Revenue, Public Debt, Public Expenditure etc.
PSO2	To understand the concepts of Mathematical and Statistical Techniques that are used in economic analysis.
PSO3	To understand the concept regarding Economic History of India.
PSO4	To understand the basic concepts of Money, Banking, & monetary standards, central banking system etc.
PSO5	To understand the concepts of Economic Thoughts.
PSO6	To understand the concepts of Environment Economics.

Programme Specific Outcomes (PSOs): UG III Year Bachelor of Economics	
PSO1	To understand the basic concept of International Trade.
PSO2	To understand the concept of Data Science and its applications.
PSO3	To understand the economy of Uttarakhand.
PSO4	To understand the concept of Structure & Problems of Indian Economy.
PSO5	To understand the basic concept of Theory of Economic Growth & Development.
PSO6	To understand the concepts of Gender studies

Programme Specific Outcomes (PSOs): UG IV Year Bachelor of Economics with Research/ Master's in Economics	
PSO1	To understand the Advanced concepts of Microeconomics.
PSO2	To understand the Advanced concepts of Macroeconomics.
PSO3	To understand the Advanced concepts of Public Finance.
PSO4	To understand the concepts of Research Methodology.
PSO5	To understand the concepts of Mathematical Economics.
PSO6	To understand the Advanced concepts of Labour Economics.
PSO7	To understand the Advanced concepts of Agricultural Economics.
PSO8	To understand the Advanced concepts of Indian Economy.
PSO9	To understand the concepts of Cultural Economics.
PSO10	To understand the Advanced concept of Statistics.

Programme Specific Outcomes (PSOs): PG V Year Master's in Economics	
PSO1	To understand the Advanced concepts of Microeconomics.
PSO2	To understand the Advanced concepts of Macroeconomics.
PSO3	To understand the Advanced concept of Economics Growth & Development.
PSO4	To understand the concepts of Advanced International Economics.
PSO5	To understand the concept of Econometrics.
PSO6	To understand the concept of History of Economic Thought.
PSO7	To understand the concepts of Financial Institutions and Markets.
PSO8	To understand the concepts and theories of Demography.
PSO9	To understand the concepts of Industrial Economics.

Programme : Undergraduate Certificate in Economics		Year I	Semester I Paper I
Subject : Economics			
Course Code : ECODSC101	Course Title : Basics of Microeconomics with Mathematical Techniques		
Course Outcomes: The course will help students to: ▪ Overview of economics, including definitions, equilibrium types, economic analysis, and the role of mathematics in economic theory. ▪ Examination of demand theory through utility analysis, elasticity, consumer surplus, and the application of linear equations in demand and supply. ▪ Analysis of production theory, including returns to factors, production possibility curves, and the application of calculus in cost and revenue functions. ▪ Exploration of market types, classical theories of wages, rent, interest, profit, and the use of mathematical techniques for profit maximization and equilibrium calculations.			
Credits : 4 Credits		Discipline Specific Course	
Unit	Topic		No. Of Lecture
I	Definition, Nature, Scope and Methods of Economics. Production Possibility Curve and Opportunity Cost. Equilibrium: Stable, Unstable & Neutral, Short-Term & Long-Term, Particular & General, Static & Dynamic, Unique and Multiple. Economic Analysis: Micro & Macro Analysis. Static & Dynamic Analysis. Mathematical Techniques in Economics: Nature and Scope of Mathematical Economics. Mathematical Economics Vs Literary Economics. Mathematical Economics Vs Econometrics. Role of Mathematical Techniques in Economic Analysis.		13
II	Theory of Demand: Utility Analysis of Demand. (Cardinal & Ordinal Approach) Indifference Curve Analysis. Consumer's Equilibrium. Law of		17

	Demand, Giffen Goods and Inferior Goods. Concept of Elasticity of Demand & Consumer's Surplus. Economic Applications using Mathematics- Functional Relationship: Graphical Representation of Functions. Equation of Straight Lines: Understanding Application of Straight Lines in Economics. Use of Linear Equations: Linear Demand & Supply Law, Market Equilibrium. Functions: Demand and Supply. Equilibrium. Application of Differentiation: Elasticity of Demand, Use of Differential and Integral Calculus in understanding the concepts of Total (TU) and Marginal Utility (MU) and their relation.	
III	Theory of Production: Returns to a Variable Factor. Production Function: Isoquants, Fixed Proportions and Variable Proportions, Returns to Scale. Law of Diminishing Marginal Returns. Concept of Cost and Revenue. Economic Application using Mathematics: Use of Functions in Production, Cost and Revenue. Use of Differential and Integral Calculus in understanding the concepts of total, marginal, and average cost and revenue.	15
IV	Introduction to Different Types of Markets in Economics: Perfect Competition, Monopoly and Monopolistic Competition. Classical Theory of Wage, Rent, Interest & Profit. Introduction to Welfare Economics. Economic Application using Mathematics: Calculation of Profit Maximisation for Perfect Competition & Monopoly Market using Maxima-Minima, Use of Definite Integration in different markets to find Equilibrium Price and Equilibrium Quantity.	15

Programme : Undergraduate Diploma in Economics	Year II	Semester III Paper II
--	---------	--------------------------

Subject: Economics

Course Code: ECODSE301	Course Title: Basic Mathematical and Statistical Techniques in Economics
------------------------	--

Course Outcomes: The course will help students to:

- Understand and apply various number types and functions, including linear, quadratic, and exponential, to analyse economic relationships and visualize data behaviour.
- Grasp the concepts of limits and continuity, and utilize differentiation to identify maxima and minima, applying these principles to solve economic problems.
- Master integration techniques and their applications in economics, enabling the evaluation of economic models and functions.
- Employ statistical methods to analyse economic data, make informed decisions, and understand data types, measures of central tendency, and dispersion, including income inequality analysis.
- Utilize matrix operations and index number construction methods to analyse economic data and calculate economic indicators like dearness allowance.

Credits: 4 Credits	Discipline Specific Elective
---------------------------	-------------------------------------

Note: Elementary Quantitative concepts with illustration from Economics with the help of graph and equations where ever possible. Proof of theorems is not expected. (Simple Calculator without mathematical and statistical functions is allowed but candidates shall have to arrange the calculator at their own)

Unit	Topics	No. Of Lecture
I	Theory of Numbers: Natural Numbers, Integers, Rational Numbers, Irrational Numbers, Real Numbers and Complex Numbers. Indices and Surds. Variables and Constant. Equation and Identity: Linear, Simultaneous and	10

	Quadratic Equations, Use of Equations in Economics. Functions of a Single Variable: Linear Functions. Quadratic Functions. Polynomial Functions. Logarithmic and Exponential Functions, Graphing Functions: Techniques for visualizing the behaviour of different types of functions. Economic Applications of Functions.	
II	Limits and Continuity of Functions: Understanding limit & Continuity of functions. Economic Applications of Continuous and Discontinuous Functions. Derivatives and Differentiation: Definition of derivative and differential, Basic rules of Differentiation, Partial Derivatives, Higher-order derivatives, Maxima & Minima: Introduction, Absolute Maximum and Minimum Value, Application of Differentiation in Economics. Integral Calculus: Theorems of Integration, Definite Integration: Evaluation using by Substitution. Economic Application of Integration.	20
III	Statistics in Economics: Application of statistical methods to analyse economic data. Use of statistics for decision-making and policy formulation. Data Types: Primary Vs Secondary Data. Data Classifications: Point-in-Time Data, Time Series Data, Cross-Section Data. Measurement Scales: Nominal Scale, Ordinal Scale, Interval Scale. Classification and Tabulation of Data. Graphical Representation of Data. Measure of Central Tendency: Mean, Median, Mode. Measure of Dispersion: Range, Standard Deviation, Coefficient of Variation, Lorenz Curve. Skewness & Kurtosis. Application of Statistical Techniques in Economics: Summarizing Economic Data (Average Income etc.), Measurement of Income Inequality using Dispersion, Income Distribution asymmetry using Skewness.	18
IV	Matrix: Definition, Types, Elementary Operations on Matrices. Determinants. Inverse of a Matrix. Cramer's Rule. Index Numbers: Definition, Types. Simple vs. Weighted Index Numbers Construction of Index Numbers: Methods (Aggregative and Relative Methods) Fisher's Ideal Formula. Calculation of Dearness Allowance using Index Number.	12

Course Title : Data Science Techniques in Economics

Course Outcomes: The course will help students to:

- Understand the foundational concepts of data science, including data types, roles of data professionals, and data preprocessing techniques.
- Analyze and interpret various data types and collection methods in economics, while applying data cleaning and summarization techniques.
- Utilize data visualization tools and techniques to effectively present economic data, and understand the basics of predictive modelling and model evaluation.
- Explore the application of data science and machine learning in economics, addressing ethical considerations and future trends in the digital economy.

Credits : 4 Credits

Discipline Specific Elective

Unit	Topics	No. Of Lecture
I	Understanding Data Science: Definition, Importance, Scope. Understanding Structured vs. Unstructured Data. Big Data & Economic Data Sources. Role of data scientists and data analysts. Data Acquisition and Preprocessing.	10
II	Understanding Variables: Quantitative, Qualitative, Time-series, Cross-sectional Data. Data Collection Methods in Economics: Survey, Administrative Data, Experiments. Data Cleaning:	20

	Handling Missing Values, Outliers, and Duplicates. Measures of Central Tendency: Mean, Median, Mode. Measures of Dispersion: Variance, Standard Deviation. Introduction to Correlation and Regression: Focusing Economic Interpretation. Data Summarization Techniques: Tables, Charts, Economic Graphs.	
III	Data Visualization: Importance in Economics. Types of Graphs for Visualization: Line, Bar, Pie, Histogram, Scatter Plots (Use cases in Economic data). Overview of Tools: Microsoft Excel, Google Sheets, Tableau (Conceptual Understanding Only). Predictive Modelling: Introduction to Predictive Modelling (Simple Linear Regression, Introduction to Time Series Forecasting (e.g., GDP growth prediction). Basics of Model Evaluation: Concept of Overfitting and Underfitting.	15
IV	Data Science Techniques in Economics: Overview of data science relevance to economics (e.g. Spending Pattern of Consumer). Machine Learning Techniques in Economics. Data Mining and Economic Modeling. Big Data in Economics and tools for handling Big Data. Ethics and Challenges in Data Science for Economics: Ethical considerations in data collection and analysis, Challenges in Data Quality, Privacy, and Bias. Role of Artificial Intelligence in Economic Forecasting. Future Trends: Digital Economy, E-Governance, Data-driven Development. Some Real-World Case Studies.	15

Paper I

Subject : Economics

Course Code: ECODSC701

Course Title : Advanced Microeconomics-I

Course Outcomes: The course will help students to:

- Students will be able to analyze consumer choices using utility theory and indifference curve analysis, and evaluate demand elasticity and consumer surplus.
- Students will understand production functions, optimal factor combinations, and the impact of technological advancements on production efficiency.
- Students will be able to derive cost curves from production functions and analyze cost behavior, economies of scale, and their implications for business decisions.
- Students will evaluate market dynamics under perfect competition, including demand and supply interactions, market equilibrium, and the effects of taxes and price controls

Credits :4 Credits

Discipline Specific Course

Unit	Topics	No. Of Lecture
I	Introduction to Consumer Behavior: Choice & Preference of Consumer, Axioms of Rational Choice. Utility Theory: Ordinal Utility analysis, Indifference curves, Budget Constraints and their properties, Marginal Rate of Substitutions, Utility Maximization and Consumer Equilibrium. Demand Analysis: Theory of Demand, Elasticity of Demand, Concepts, Measurements. Comparative Statics- Engel Curve. Price, Substitution and Income Effects, Hicks and Slutsky Decomposition; For normal goods, Inferior goods and Giffen Goods;	16

	Marshallian and Hicksian Demand Functions. Consumer Surplus: Definition, Importance, and Calculation, Applications in Economic Analysis. Revealed Preference Hypothesis, Hicksian Revisions. Consumer Choice under Uncertainty: Simple Lottery, Compound Lottery, Definitions of Risks Aversion, Risk Lover & Risk neutral, Von Neumann-Morgenstern's Expected Utility Theory, Certainty Equivalent, Concavity of utility function and Measures of Risk Aversion.	
II	Production Theory: Overview of Production Functions, Short-Run vs. Long-Run Production Functions. Theories of Production: Law of Variable Proportions, Returns to Scale: Increasing, Constant, and Decreasing Returns. Isoquants: Definition and Interpretation, Marginal rate of technical substitution, Elasticity of Substitution. Optimal Factor Combination: Equilibrium of the Firm, Choosing the Optimal Combination of Production Factors. Production Function: Cobb Douglas, Constant Elasticity of Substitution (CES), Variable Elasticity of Substitution (VES), The Role of Technical Progress in Shaping Production Functions, Impact of Technological Advancements on Production Efficiency. Producer's Equilibrium and Input supply functions.	16
III	Cost and Revenue Functions: Short run and long run cost, Marginal and Average Cost Concepts. Traditional and Modern Theories of Costs: Examination of Traditional Cost Theories, Overview of Modern Approaches to Cost Analysis. Definition of Iso-cost curve, Scale Lines and Ridge Lines. Derivation of Cost Curves from Production Functions: Understanding the Relationship Between Production Functions and Cost Curves. Economies of Scale: Definition and Types, Impact on Long-Run Average Cost Curves. Cost Structures: Fixed Costs vs. Variable Costs, Economies and Diseconomies of Scale. Analysis of Cost Behavior over different Time Horizons. Revenue Concepts: Understanding the relations between Revenue Curves (Average Revenue (AR), Marginal Revenue (MR), and Total Revenue (TR)).	16
IV	Competitive Markets -Perfect Competition: Introduction to Market Structures and Perfect Competition – Definition, Market Equilibrium and Equilibrium of a firm under Perfect Competition (Short Run & Long Run), Shut Down Point, Break-Even Point, AVC and Supply Curve. Tax Incidence Analysis: Understanding how taxes affect market prices and consumer behaviour, Analysis of the distribution of tax burdens between consumers and producers. Price Controls and Their Effects: Overview of government-imposed price controls, including price ceilings and floors, Discussion of the consequences of these controls on market efficiency and resource allocation.	12

Programme: Master's in Economics		Year V	Semester IX Paper I
Subject : Economics			
Course Code: ECODSC901		Course Title : Advanced Microeconomics-II	
Course Outcomes: The course will help students to:			
• Students will be able to analyse the characteristics of imperfect competition, evaluate monopoly power and its effects, and apply game theory to understand strategic interactions in oligopoly. • Students will understand the implications of adverse selection, analyse information asymmetries, and explore mechanisms like signalling and screening to improve market outcomes. • Students will differentiate between price concepts, apply general equilibrium models, and assess efficiency and optimality in resource allocation using tools like the Edgeworth Box and Walras' Law. • Students will evaluate the fundamental theorems of welfare economics, analyse public goods and externalities, and discuss social choice theory and contemporary debates on welfare and equity.			
Credits :4 Credits		Discipline Specific Course	
Unit	Topics		No. Of Lecture
I	Introduction to Imperfect Market Structure: Definition and characteristics of imperfect competition, Comparison with perfect		15

	competition and monopoly. Monopoly: Reasons for Monopoly, Monopoly Power & Lerner's Index, Impact of Monopolies on Consumer Welfare and Market Efficiency. Monopoly Equilibrium: Determining equilibrium in a monopoly market, Analysis of pricing and output decisions. Multi-plants Monopoly. Price Discrimination: Overview of price discrimination and its types, Effects of price discrimination on consumer surplus and firm profits. Monopolistic Competition- Equilibrium Condition and Firm Behaviour. Oligopoly: Characteristics of oligopolistic markets, Strategic interactions among firms in an oligopoly. Economic Models of Oligopoly: Cournot Model, Bertrand Model, Chamberlin Model, Kink Demand Curve Model & Stackelberg Model. Game theory: Nash equilibrium, Prisoner's dilemma, saddle point solution, cooperative versus non-cooperative games, simultaneous games and sequential games. Tax Incidence: Understanding tax incidence and its implications in imperfect markets, analysis of how taxes affect prices and consumer behaviour. Market Failures: Understanding the concept of market failure, types, causes and consequences of inefficiencies in markets.	
II	Information and Market Efficiency: Analysis of how information asymmetries impact the efficiency of market outcomes, Role of information in facilitating or hindering effective market transactions. Understanding Adverse Selection: Definition, significance, concept through "Market for Lemons" model. Signalling Mechanisms: Exploration of signalling and examples in various markets. Screening Techniques: Examination of how screening can mitigate adverse selection and improve market outcomes. Moral Hazard: Definition and implications of moral hazard in insurance and financial markets. Principal-Agent Problem: Analysis, challenges Exploration of strategies to align incentives and reduce agency costs.	15
III	General Equilibrium Analysis - Price Concepts: Differentiating between absolute prices and relative prices. Perfect Competition Prices and General Equilibrium Models – with and without production. Pure Exchange Economy: Edgeworth Box. Efficiency and Optimality: Understanding Pareto improvements, Defining Pareto efficiency in allocation of goods and resources, Exploration of the contract curve and its role in identifying efficient allocations. Walras' Law: Introduction to Walras' Law and its implications for equilibrium of market, Conditions necessary for achieving Walrasian equilibrium, Walrasian Equilibrium Analysis.	15
IV	Welfare Economics: Introduction to the first and second fundamental theorems of welfare economics, graphical representation and interpretation. Interpersonal Comparisons and Ethical Considerations: Challenges associated with interpersonal comparisons	15

	of utility, Examination of the aggression problem and its implications for welfare assessments. Public Goods and Externalities: Understanding the characteristics of public goods and the issues surrounding their provision. Analysis of externalities and their impact on social welfare, including positive and negative externalities, Pigovian & Coasian Solution. Social vs. Private Welfare: Exploration of the divergence between social welfare and private welfare, Discussion of the implications for economic policy and resource allocation. Compensation Principle: Introduction to the compensation principle and its role in welfare economics, Evaluation of how this principle can guide policy decisions to improve social welfare. Pareto Optimality: Definition and significance of Pareto optimality in resource allocation, Analysis of conditions under which Pareto efficiency is achieved. Social Choice Theory: Overview of social choice theory and its relevance to welfare economics, Recent schools of thought (Amartya Sen and Ronald Coase).
